

In re Appln. of Deflin et al.
Application No. Unassigned
(U.S. National Phase of PCT/FR2004/000936)

Amendments to the Abstract

Please delete the Abstract appearing in the front page of the PCT publication and add the following new Abstract:

The invention relates to a flexible display, comprising a flexible support, discrete light sources, arranged in a dispersed manner on the flexible support, means for controlling power supply for the light sources, means, incorporated in the flexible support, for transmission between the means for control of the power supply and the discrete light sources, and control and power signals for the discrete light sources. The above further comprises a diffuser element, covering the light sources, such that the light originating from two adjacent discrete light sources produces an essentially continuous light display on a face of the diffuser element opposite the light sources.

A replacement Abstract is attached hereto on a separate sheet in accordance with 37 CFR 1.72.

ABSTRACT

The invention relates to a flexible display, comprising a flexible support, discrete light sources, arranged in a dispersed manner on the flexible support, means for controlling power supply for the light sources, means, incorporated in the flexible support, for transmission between the means for control of the power supply and the discrete light sources, and control and power signals for the discrete light sources. The above further comprises a diffuser element, covering the light sources, such that the light originating from two adjacent discrete light sources produces an essentially continuous light display on a face of the diffuser element opposite the light sources.
